12: Provider Supplied Formula was Served to a Child Whose File Indicates the Parent Supplies Formula

Last Modified on 03/08/2019 11:49 am CST

This error is generated when providers serve provider-supplied formula to a child who's file indicates that the child should be served parent-supplied formula. For example, a provider served an infant provider-supplied formula, but the child's file indicates that the child should receive parent-supplied breast milk. It is a warning only. This warning message can be disabled, if needed. This error is the opposite of **Error 10** .

Minute Menu HX examines the child's enrollment file for the infant formula preference when determining whether a given infant meal has all the required components to warrant reimbursement. This means that meal reimbursement is based on the child's file, regardless of the type of formula the provider notes when filing out claim forms (when marking scannable forms or using KidKare).

> **Note:** You set formula preferences in the Child Information Special tab.
