84: Provider is not Approved for Given Meal Serving

Last Modified on 03/07/2019 9:14 am CST

You can configure Minute Menu HX to allow providers to accurately record split shifts/servings (when a meal is served twice in a given day to two different groups of children). This is controlled by the setting you select in the Highest Meal Shift Tracked drop-down menu in the Provider Information window.

This error is generated when a provider attempts to claim a second serving of a given meal, but they are only approved for one (1) serving. It can ignore, warn, or disallow the additional shifts.
