

# 121: Meals Served Before Provider Opened or After Provider Closed

Last Modified on 03/07/2019 1:51 pm CST

You can record open and close times for each of your providers in the Provider Information Other tab. If you do so, this error is generated when a meal is served before the provider's open time or after their close time. This can ignore, warn, or disallow the affected meal(s). If it is set to ignore, the open/close times on file are also ignored.

Note that when the open time is before the close time, overnight care is assumed. Night times are examined if enabled. Use the Examine Meal History window to look at the time a meal was served in any KidKare claim, or use the Provider Information Meals tab to review the provider's meal times for paper claims (scanning or direct entry).
