

127: Child Claimed on Holiday

Last Modified on 03/07/2019 2:38 pm CST

You can use the Sponsor Calendar to set up specific holidays. Providers can then use the Child Calendar in KidKare to indicate that a child was approved to attend care on the given holiday, or they can note it on their monthly CIF, which allows you to record the information in the Child Calendar in Minute Menu HX.

This error is generated when a child is claimed on a holiday, but when the child was not noted as approved on that holiday via the Child Calendar. It ignores, warns, or disallows the meals claimed on the holiday. It can also be set to ignore or warn children who have been noted as Present on a Holiday in the Child Calendar (while still disallowing those without Present on a Holiday noted), or it can be set to always disallow regardless of what is found on the child calendar.
