

143: Insufficient Time was Allowed Before/After this Meal and the Previous/Next Meal (Infants Ignored)

Last Modified on 03/07/2019 3:55 pm CST

Some agencies want to ensure that meals and snacks are served within certain times of each other, typically two (2) or three (3) hours. You can configure Minute Menu HX to check minimum times between meals, based on your policies. This error is generated if a provider serves a meal too close to another meal. It warns or disallows the meal.

For providers who use scannable forms, this error checks the times entered in the Provider Information Meals tab. For providers who use KidKare and In/Out forms, the actual supplied meal times are checked instead. When researching this error, check the Examine Meal History window for KidKare claims, and check Provider Information for paper claims (direct entry or scannable claims). Pay special attention to AM/PM discrepancies.
